Table of Contents

Executive Summary

Greater Essex District School Board retained Waste Reduction Group ("WRG") to conduct a solid, non-hazardous waste audit for the Dr. David Suzuki Public School (Dr. David Suzuki PS) located at 6320 Raymond Ave in Windsor, Ontario (the Site). The audit complied with the Environmental Protection Act, O.Reg. 102/94: Waste Audits and Waste Reduction Work Plans, and O.Reg. 103/94: Industrial, Commercial, and Institutional Source Separation Program.

The objectives of the audit were to determine the composition of the garbage, recycling, and organics streams by point of origin, quantify Dr. David Suzuki PS estimated 2024 annual waste generation, determine the waste diversion and capture rates, identify additional opportunities for waste reduction and diversion, and address any specific concerns identified during the study.

The scope of the waste audit included collecting one (1) sample of the Red Box stream, one (1) sample of the Blue Box stream and three (3) samples of the Garbage stream.

Findings and Conclusions

It should be noted that the conclusions and recommendations provided in this report are based on the waste audit sample results, which are considered representative of the annual quantities for this report. The estimates in this report have yet to account for fluctuations in waste quantities generated daily.

The conclusions discussed below are based on the waste audit findings. It should be noted that the conclusions and recommendations provided in this report are based on the waste audit sample results, which are considered representative of the annual quantities for this report. The estimates in this report have yet to account for fluctuations in waste quantities generated daily.

Sample Composition

- Garbage stream samples had the highest sample mass (59.24%) followed by Red Box (28.59%) and the Blue Box stream (11.99%).

Composition By Waste Stream

- **Garbage Stream** - the garbage stream had the highest sample mass and consisted primarily of organics (9.41kg, 13.65%) fine paper (6.52kg, 9.46%) and cardboard (6.58kg, 9.55%).
- **Red Box** - consisted primarily of paper towels (6.78kg, 9.84%) and fine paper (6.39kg, 9.27%).
- **Blue Box** - consisted primarily of LDPE #4 plastic, aseptic containers and HDPE #2 plastic.

Composition by Functional Area

- **Classroom** - generated the highest sample mass (92.67% of total sample mass) which consisted primarily of fine paper, organics, paper towels, cardboard and boxboard.

Contamination

- The contamination rates for the sampled streams were as follows: Garbage stream - 23.12%, Red Box stream - 0.06% and Blue Box stream - 0.67%.
- The **Red Box** sample consisted of 52.44% Red Box material, 45.23% Garbage material and 2.34% Blue Box material.
    - 34.42% of the Red Box sample consisted of paper towels, 32.44% consisted of fine paper, 14.11% consisted of boxboard and 5.18% consisted of organics.
    - 47.57% of the Red Box sample was contaminated with Blue Box material or garbage which consisted primarily of paper towels, organics and LDPE #4 plastic
- The **Blue Box** sample consisted of 63.32% Blue Box material, 31.96% garbage material and 4.72% Red Box material.
    - 16.22% of the Blue Box sample consisted of aseptic containers or LDPE #4 plastic film, 15.74% consisted of HDPE #2 plastic, 13.08% consisted of PET #1 and 12.23% consisted of aluminum.
    - Roughly 36.68% of the Blue Box sample was contaminated with garbage or Red Box material. Contaminated material consisted primarily of LDPE #4 plastic, non-recyclable material, fine paper, polystyrene #6, organics and paper towels.
- The **garbage** sample consisted of 49.21% Red Box material, 43.84% garbage material, 6.64% Blue Box material, and 0.31% Electronics/Special items.
    - The garbage sample consisted primarily of organics, cardboard, fine paper, boxboard, paper towels, non-recyclables, and kraft paper.
    - Roughly 56.16% of the garbage stream sample was contaminated with Red Box material, Blue Box material, or Electronics/Special items. Contamination in the garbage stream consisted primarily of organics, paper towels and non-recyclables.

Recyclables in the Garbage Stream

- The garbage sample consisted of 33.85% Mandatory Recyclables, 22.31% Other Recyclables, and 43.84% Other (Non-Recyclable) material.
- The **Mandatory Recyclables** in the garbage stream consisted of (in % of total sample mass):
    - Cardboard - 16.07%
    - Fine paper - 15.93%
    - Aluminum - 1.12%
    - Glass - 0.73%
- The **Other Recyclables** in the garbage stream consisted primarily of:
    - Boxboard - 10.33%
    - PET #1 - 6.83%
    - PP#5 - 2.25%
- **Estimated Annual Quantities Generated** - 13.37 MT of material are expected to be generated annually which consists primarily of the following materials:
    - Fine paper - 2.58 MT
    - Organics - 2.08 MT
    - Paper towels - 2.02 MT
    - Cardboard - 1.45 MT
    - Boxboard - 1.36 MT
- The 2024 **waste diversion rate was calculated to be 40.58%** (below the provincial objective of 60%) based on 5.42 MT of diverted waste and 13.37 MT of total waste generated and 194 school days.
- The overall **Capture Rate is 41.65%** based on a total diverted quantity of 3.18 MT and a total potential divertible quantity of 7.64 MT. The Blue Box capture rate was 67.68% and Red Box capture rate was 34.73%.

Recommendations

Mandatory Recyclables

- **Cardboard — 1.28 MT** of material is estimated to be generated annually through the garbage stream. Diverting this material through the existing Red Box stream could **increase the waste diversion rate up to 9.55%** and **could increase the capture rate up to 16.7%.**
- **Fine paper — 0.26 MT** of material is estimated to be generated annually through the garbage stream. Diverting this through the Red Box stream could **increase the waste diversion rate up to 9.46%** and **could increase the capture rate up to 16.55%.**
- **Aluminum — 0.09 MT** of material is estimated to be generated annually through the garbage stream. Diverting this material through the existing Blue Box stream could **increase the waste diversion rate up to 0.66%** and **could increase the capture rate up to 1.16%.**

Red Box and Blue Box Streams

- **Boxboard - 0.82 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing Red Box stream could **increase the waste diversion rate by up to 6.1%.**

- **Kraft Paper/Other Fibres** - **0.54 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing streams could **increase the waste diversion rate by up to 4.1%.**
- **PET #1** - **0.18 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing Blue Box stream could **increase the waste diversion rate by up to 1.3%.**
- **Gable top containers** - **0.06 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing streams could **increase the waste diversion rate by up to 0.45%.**

Add Organics Diversion Program

Organics generated in the garbage stream accounted for 1.83 MT of material annually. Diverting this material through a new organics diversion program **could increase waste diversion by up to 13.65%**.

Paper towels generated in the garbage stream accounted for 0.68 MT of material annually. Diverting this material through a new organics diversion program **could increase waste diversion by up to 5.05%**.

Dedicated Receptacles and Update Signage

Waste diversion rates could be improved by implementing dedicated receptacles with clear signage to encourage waste separation at the source. Provide dedicated receptacles with signage and pictograms as a clear message to staff and students to separate divertible materials from landfill waste at the source. Pictograms can provide examples of the types of waste suitable for the waste collection stream. Divertible material should be consolidated into a centralized location and picked up by a dedicated contractor.

Promoting Culture

A committee is recommended to oversee waste reduction and sustainability and promote a culture of waste diversion. Educate students and staff on the importance of waste diversion and communicate the corporate goals for waste diversion and sustainability. Create a positive message around the benefits of waste diversion and the individual's role.

- Support and encourage purchasing and using “environmentally friendly,” reusable or recyclable materials, packaging, and/or recycled content.
- Ensure an Environmental Policy is visible in common areas throughout the building and continue to emphasize the facility’s commitment to environmental stewardship through its training program and green or environmental initiatives.
- Encourage staff and students to prioritize bringing reusable containers, water bottles, and coffee cups.
- Promote and highlight current environmental programs and efforts through newsletters, posters, and/or bulletin boards for waste management.

Continuous Monitoring and Process Improvement

Track year-over-year waste diversion change capture rates and communicate progress to staff and students to encourage further participation/engagement.

Continuous monitoring and reporting for this site annually and comparison with year-over-year changes would provide insight into trends, which can be used as a basis for policy decisions regarding solid waste management for future projects. Further refinements to programs/processes can be made, and adherence to provincial requirements can be achieved.

1. Introduction

Greater Essex District School Board retained Waste Reduction Group ("WRG") to conduct a solid, non-hazardous waste audit for Dr. David Suzuki Public School located at 6320 Raymond Ave in Windsor, Ontario (the Site). The audit complied with the Environmental Protection Act, O.Reg. 102/94: Waste Audits and Waste Reduction Work Plans, and O.Reg. 103/94: Industrial, Commercial, and Institutional Source Separation Program.

1.1 Purpose and Objectives

The purpose of the waste audit was to comply with Ontario Regulation 102/94 – Waste Audits and Waste Reduction Work Plans Part XI, which requires educational institutions to conduct a waste audit covering the waste generated by the establishment operating at the site and prepare and implement a waste reduction work plan on an annual basis to confirm compliance with Ontario Regulation 103/94 – IC&I Source Separation Programs.

The objectives are as follows:

- Determine the composition of the Red Box, Blue Box and Garbage streams by point of origin,
- Quantify the estimated 2024 annual waste generation for all waste streams based on audit data and the number of days in the school year,
- Determine the waste diversion and capture rates,
- Identify additional opportunities for waste reduction and diversion; and
- Address any specific concerns identified during the study.

The Site is considered to apply to O.Reg. 103./94 – Educational Institutions.

2. Scope of Work

To meet the objectives outlined above, the following activities were undertaken by WRG:

- Collected one (1) sample of the Red Box stream, one (1) sample of the Blue Box stream and three (3) samples of the Garbage stream.
- Sorted samples into predetermined categories as set out by WRG (detailed in Appendix A: List of Categories)
- Determined the total quantity of waste diverted from landfill through current reduction, reuse, and recycling programs implemented at the school. Quantities were calculated using sample mass multiplied by the number of school days per year;
- Completed a waste audit report summarizing the audit findings and provided recommendations for increased waste diversion efficiency.
- Conducted a site tour accompanied by site personnel and interviewed staff to obtain information on existing waste diversion practices.

3. Sampling Methodology

On November 7th, 2024, WRG collected one (1) sample of the Red Box stream, one (1) sample of the Blue Box stream and three (3) samples of the Garbage stream. The samples were collected from the following functional areas.

Table 1: Sample Summary

Functional Area	Blue Box	Garbage	Red Box	Total
Classroom	1	1	1	**3**
Gym		1		**1**
Washrooms		1		**1**
Total	**1**	**3**	**1**	**5**

Qualified WRG staff sorted the materials using containers to keep them separate. Waste was sorted into individual material categories and weighed using a calibrated scale (Appendix B: Scale Calibration Certificate). It was then re-bagged and disposed of in an appropriate waste container.

4. Waste Audit Findings

A total of 68.9 kg of sample materials was collected for the waste audit. The following sections summarize the site tour findings and analyze the sample composition.

4.1 Site Tour

During the tour of the Site, the following observations were made by WRG representatives:

- The Site implements garbage, Blue Box, and Red Box streams and collects specialty materials, including hazardous waste and medical equipment.
- Dedicated bins were available for each stream
- Signage was observed to be limited.

An analysis of the sample composition is provided in the following sections.

4.2 Sample Composition by Sampled Stream

Based on the audit findings, the Garbage stream sample had the highest sample mass (59.24%) followed by Red Box (28.59%) and the Blue Box stream (11.99%). The figure below shows the sample composition by material and sampled stream.

Table 2: Sample Composition by Sampled Stream and Material
(in kg and % of total sample by mass)

Sampled Stream	Red Box		Blue Box		Garbage		Total	
O.Reg 103/94 Type	kg	%	kg	%	kg	%	kg	%
Non-Recyclable	**8.91**	**12.93%**	**2.64**	**3.83%**	**17.95**	**26.05%**	**29.50**	**42.81%**

Notable observations are described below:

- **Garbage Stream** - the garbage stream had the highest sample mass and consisted primarily of organics (9.41kg, 13.65%) fine paper (6.52kg, 9.46%) and cardboard (6.58kg, 9.55%).
- **Red Box** - consisted primarily of paper towels (6.78kg, 9.84%) and fine paper (6.39kg, 9.27%).
- **Blue Box** - consisted primarily of LDPE #4 plastic, aseptic containers and HDPE #2 plastic.

4.3 Sample Composition by Functional Area

The classroom generated the highest sample mass (92.67%) which consisted primarily of fine paper, organics, paper towels, cardboard, and boxboard. The figure below shows the sample composition by material and functional area.

Table 3: Sample Composition by Functional Area and Material (in kg and % of total sample by mass)

Functional Area	Classroom		Gym		Washrooms		Total	
Material	kg	%	kg	%	kg	%	kg	%
Fine Paper	13.28	19.27%	0.00	0.00%	0.01	0.01%	**13.29**	**19.29%**
Organics	9.86	14.31%	0.01	0.01%	0.84	1.22%	**10.71**	**15.54%**
Paper Towels/Compostable Fibres	9.28	13.47%	0.01	0.01%	1.13	1.64%	**10.42**	**15.12%**

Batteries	0.00	0.00%	0.00	0.00%	0.01	0.01%	**0.01**	**0.01%**
Total	**63.85**	**92.67%**	**0.88**	**1.28%**	**4.17**	**6.05%**	**68.90**	**100.00%**

Notable observations are described below:

- **Classroom** - generated the highest sample mass (92.67% of total sample mass) which consisted primarily of fine paper, organics, paper towels, cardboard and boxboard.

4.4 Sample Contamination

The contamination rates for the sampled streams were as follows: Garbage stream - 23.12%, Red Box stream - 0.06% and Blue Box stream - 0.67%. The figures below show the contamination rate by the sampled stream and functional area.

Figure 1a: Contamination Rate by Sampled Stream

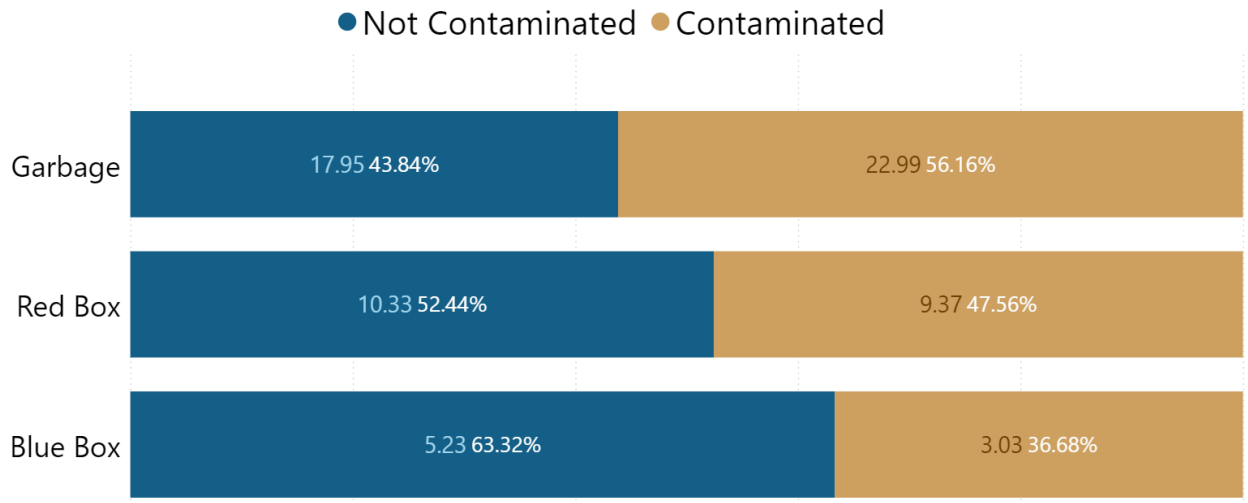

Figure 1b: Contamination Rate by Sampled Stream and Functional Area

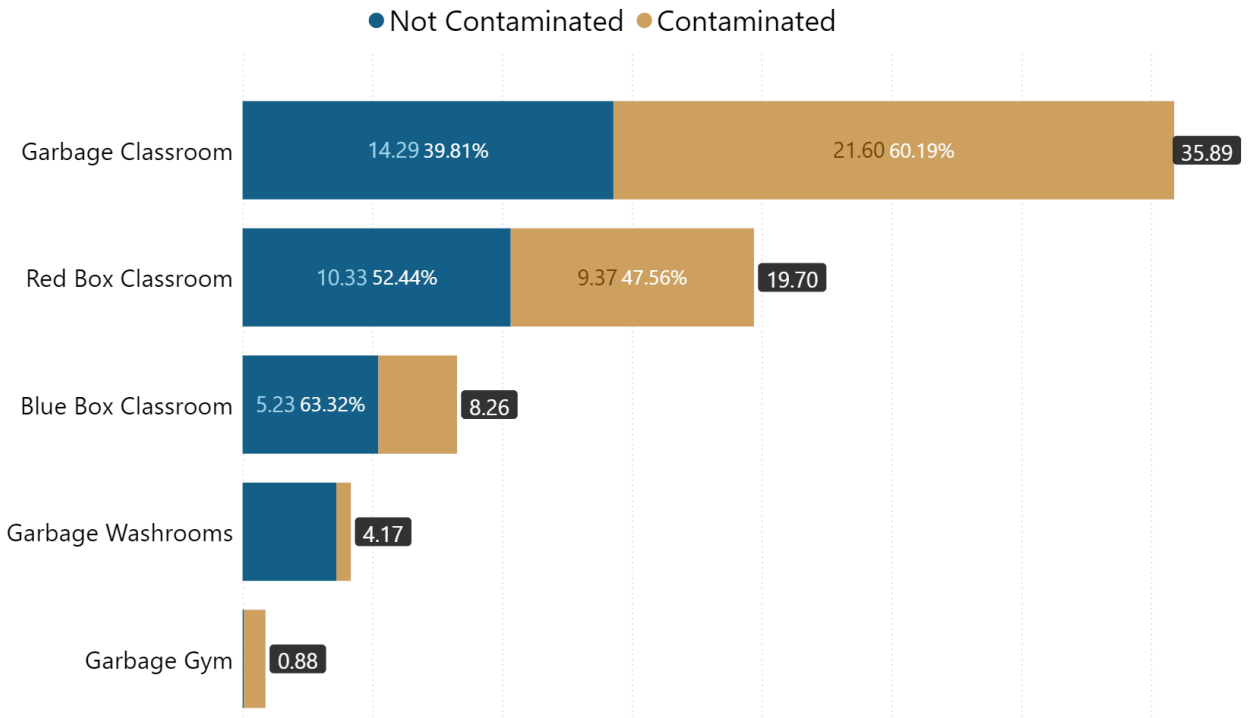
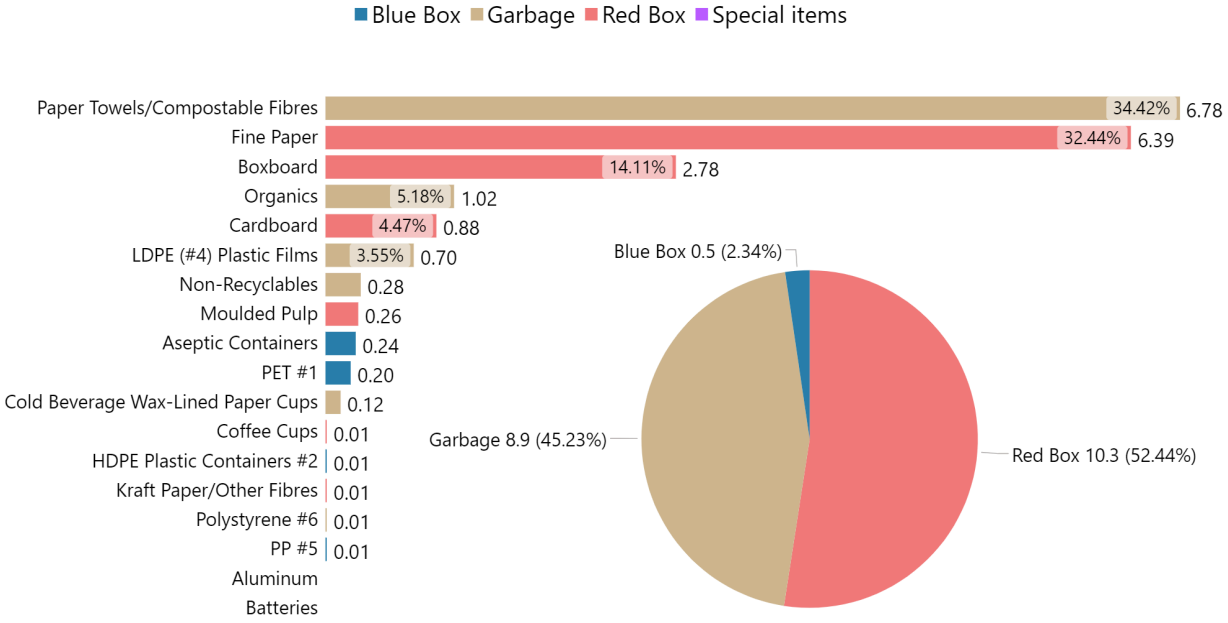


4.3.1 Red Box Sample Composition and Contamination

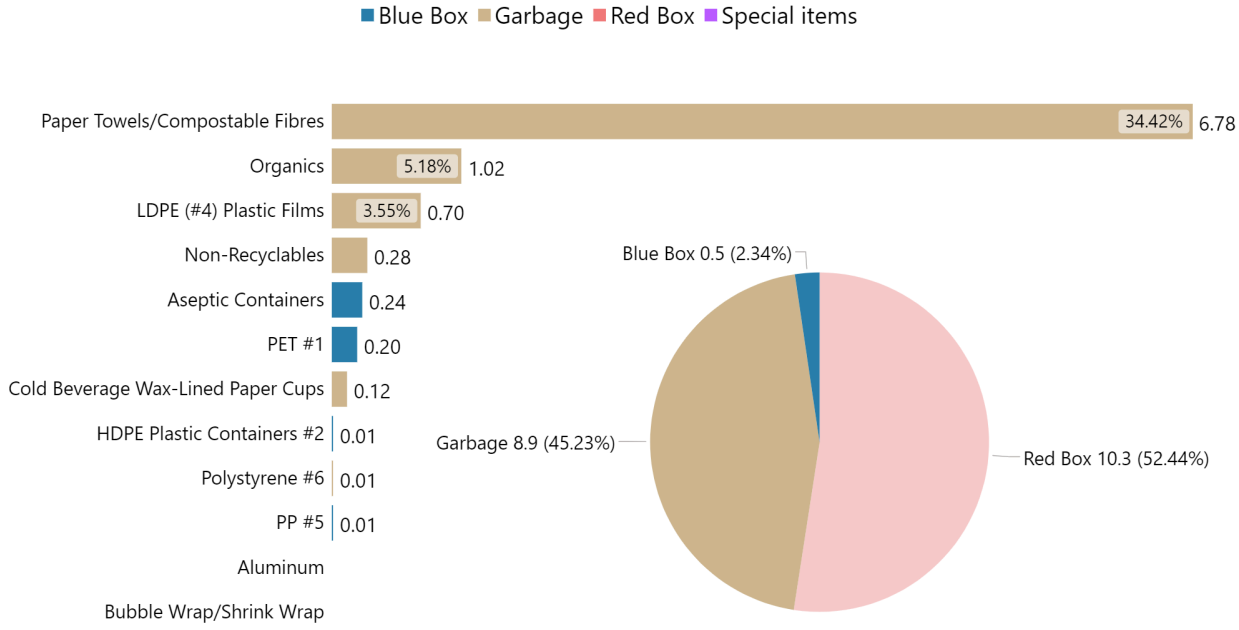
The Red Box sample consisted of 52.44% Red Box material, 45.23% Garbage material and 2.34% Blue Box material. The sample composition is shown in the figure below.

Figure 2a: Red Box Sample Composition (kg and % of sample stream)



Roughly 47.57% of the Red Box sample was contaminated with Blue Box material or garbage. The breakdown of contamination is shown in the figure below.

Figure 2b: Red Box Sample Contamination (kg and % of sample stream)



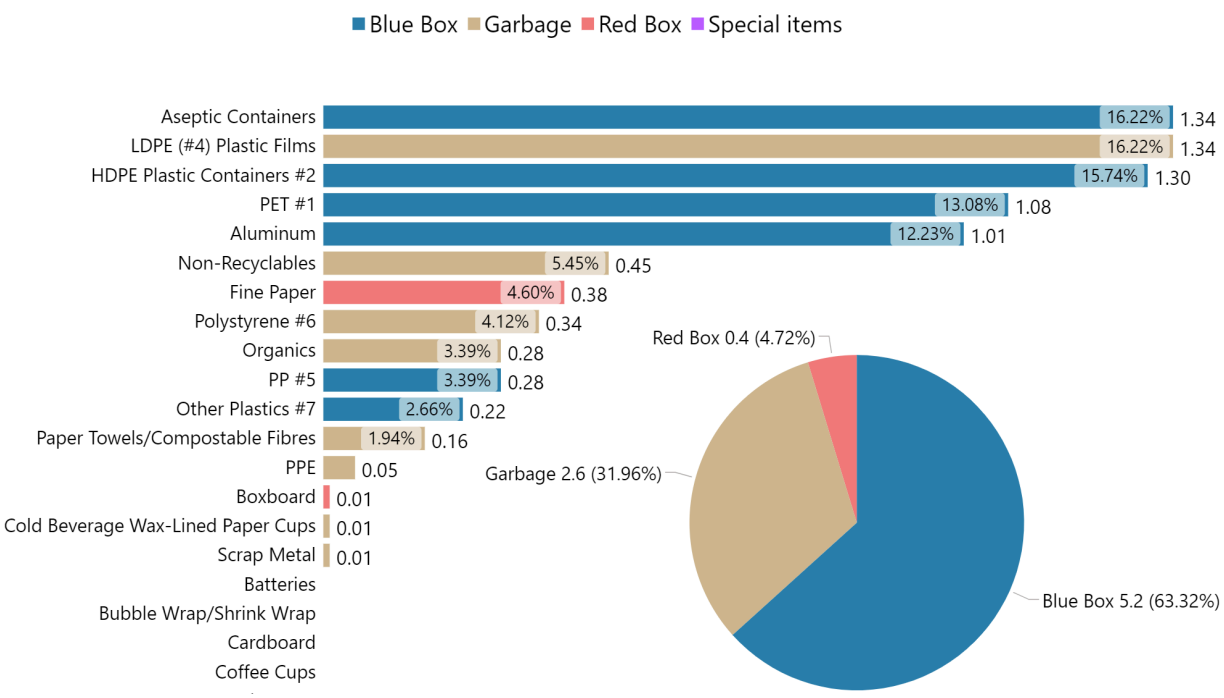
Notable Observations

- The Red Box sample consisted of 52.44% Red Box material, 45.23% Garbage material and 2.34% Blue Box material.
- 34.42% of the Red Box sample consisted of paper towels, 32.44% consisted of fine paper, 14.11% consisted of boxboard and 5.18% consisted of organics.
- 47.57% of the Red Box sample was contaminated with Blue Box material or garbage which consisted primarily of paper towels, organics and LDPE #4 plastic

4.3.2 Blue Box Sample Composition and Contamination

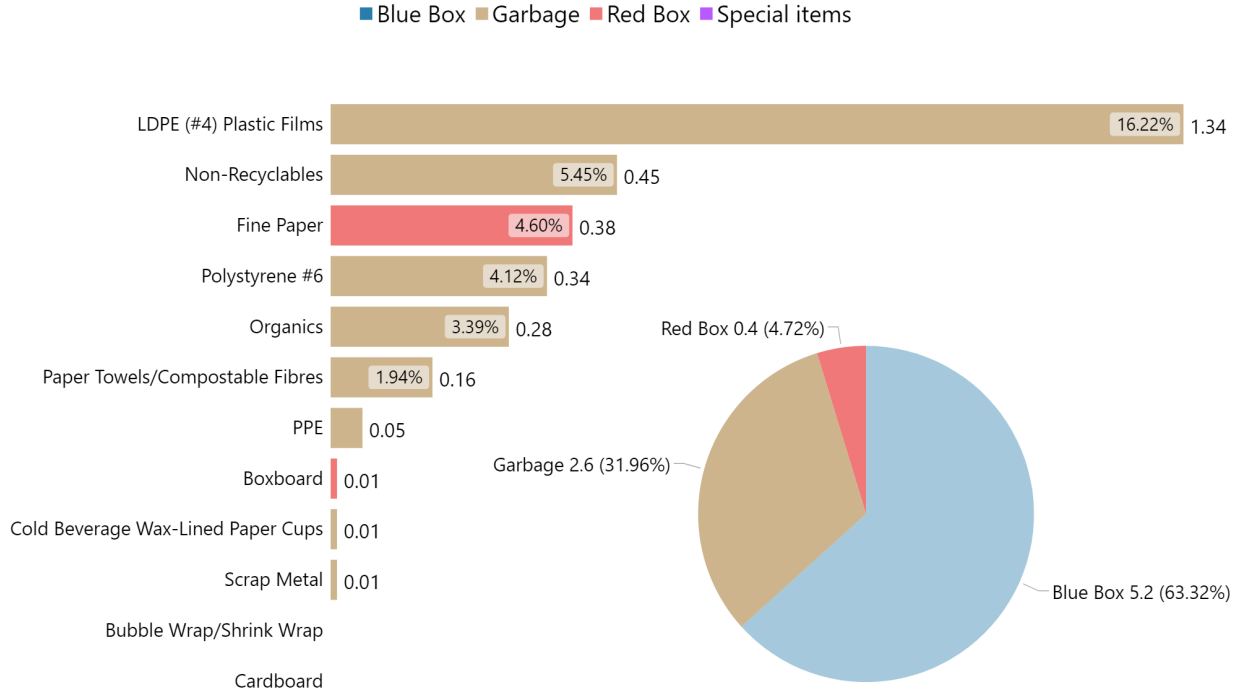
The Blue Box sample consisted of 63.32% Blue Box material, 31.96% garbage material and 4.72% Red Box material. The sample composition is shown in the figure below.

Figure 3a: Blue Box Sample Composition
(kg and % of sample stream)



Roughly 36.68% of the Blue Box sample was contaminated with garbage or Red Box material. The breakdown of contamination is shown in the figure below.

Figure 3b: Blue Box Sample Contamination (kg and % of sample stream)



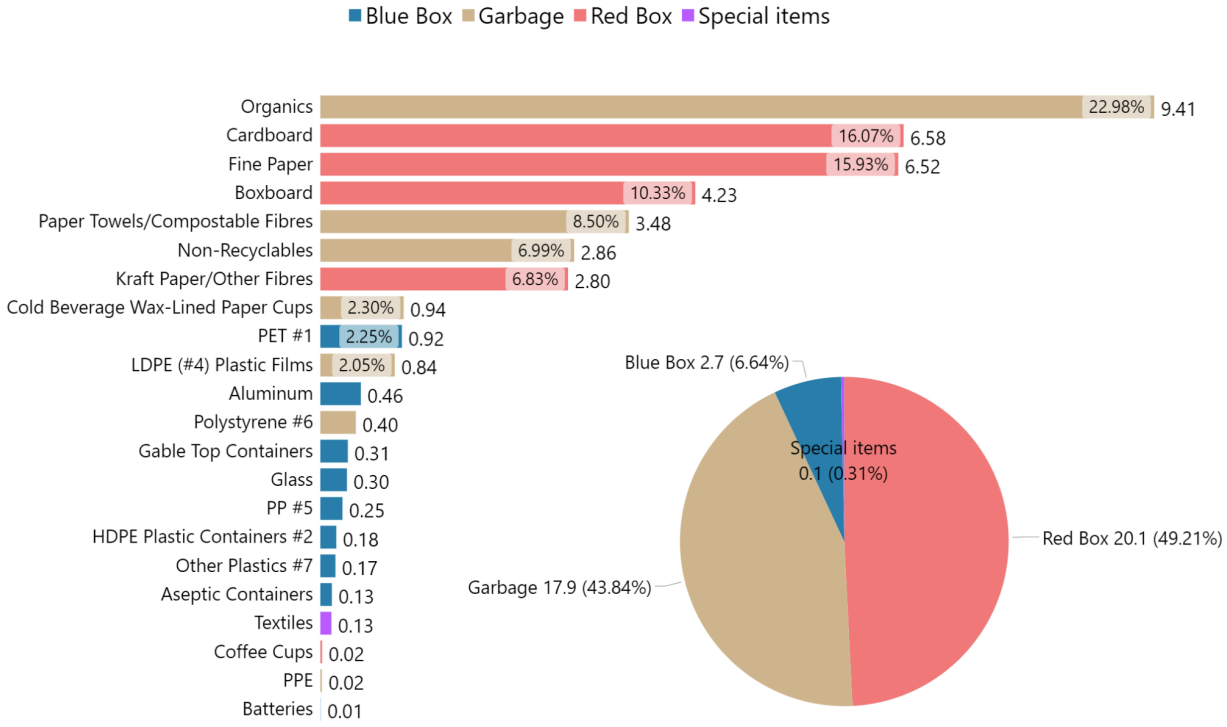
Notable Observations

- The Blue Box sample consisted of 63.32% Blue Box material, 31.96% garbage material and 4.72% Red Box material.
- 16.22% of the Blue Box sample consisted of aseptic containers or LDPE #4 plastic film, 15.74% consisted of HDPE #2 plastic, 13.08% consisted of PET #1 and 12.23% consisted of aluminum.
- Roughly 36.68% of the Blue Box sample was contaminated with garbage or Red Box material. Contaminated material consisted primarily of LDPE #4 plastic, non-recyclable material, fine paper, polystyrene #6, organics and paper towels.

4.3.3 Garbage Sample Composition and Contamination

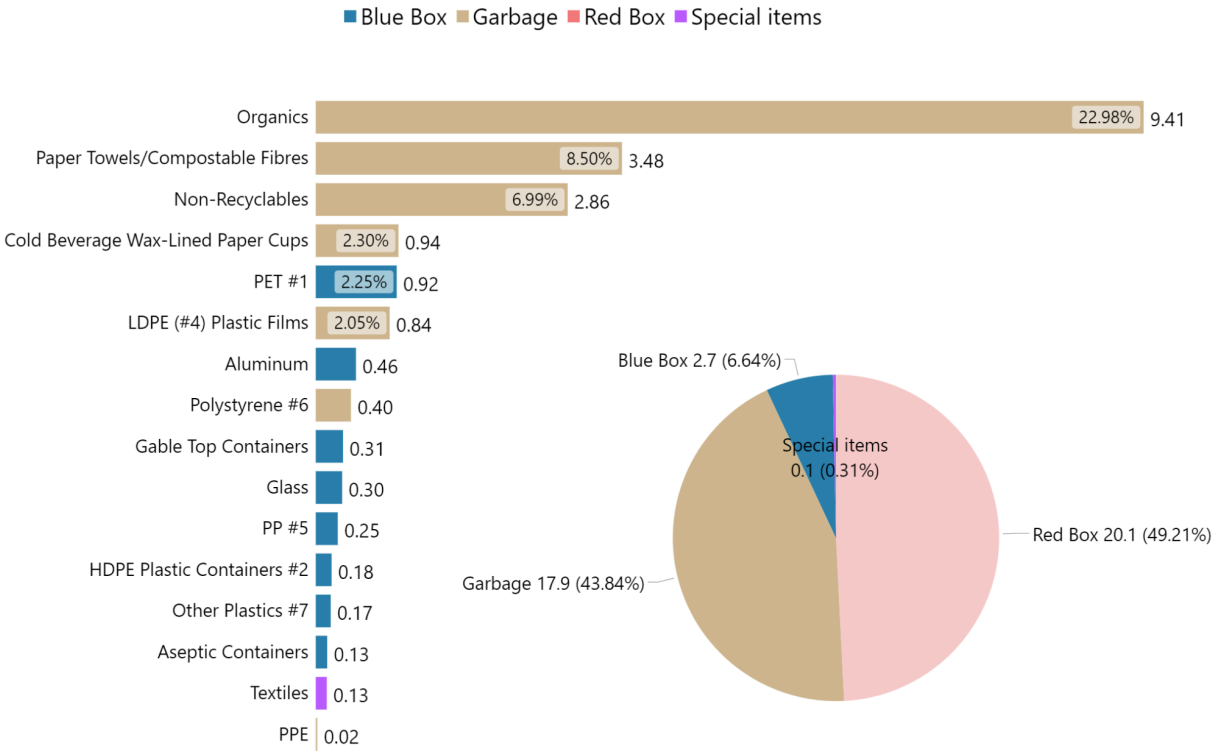
The garbage sample consisted of 49.21% Red Box material, 43.84% garbage material, 6.64% Blue Box material, and 0.31% Electronics/Special items. The sample composition is shown in the figure below.

Figure 4a: Garbage Sample Composition
(% of total sample mass and kg)



Roughly 56.16% of the garbage stream sample was contaminated with Red Box material, Blue Box material, or Electronics/Special items. A breakdown of the contamination is shown in the figure below.

Figure 4b: Garbage Sample Contamination
(% of total sample mass and kg)



Notable Observations

- The garbage sample consisted of 49.21% Red Box material, 43.84% garbage material, 6.64% Blue Box material, and 0.31% Electronics/Special items.
- The garbage sample consisted primarily of organics, cardboard, fine paper, boxboard, paper towels, non-recyclables, and kraft paper.
- Roughly 56.16% of the garbage stream sample was contaminated with Red Box material, Blue Box material, or Electronics/Special items. Contamination in the garbage stream consisted primarily of organics, paper towels and non-recyclables.

4.5 Recyclables in the Garbage Stream

Based on the waste sample composition analysis, Mandatory Recyclables and Other Recyclables were identified in the garbage stream. The garbage sample consisted of 33.85% Mandatory Recyclables, 22.31% Other Recyclables, and 43.84% Other (Non-Recyclable) material.

A description of the recyclable materials subject to O.Reg. 103/94 is provided below.

Mandatory Recyclables

O.Reg.193/04 requires that schools source separate the following materials (at a minimum):

- Aluminum food and beverage cans
- Cardboard (corrugated)
- Fine paper
- Glass food and beverage bottles/jars
- Newsprint
- Steel food and beverage cans

Other Recyclables

This includes any material eligible for recycling or that can be diverted from landfills. Other Recyclables include the following materials:

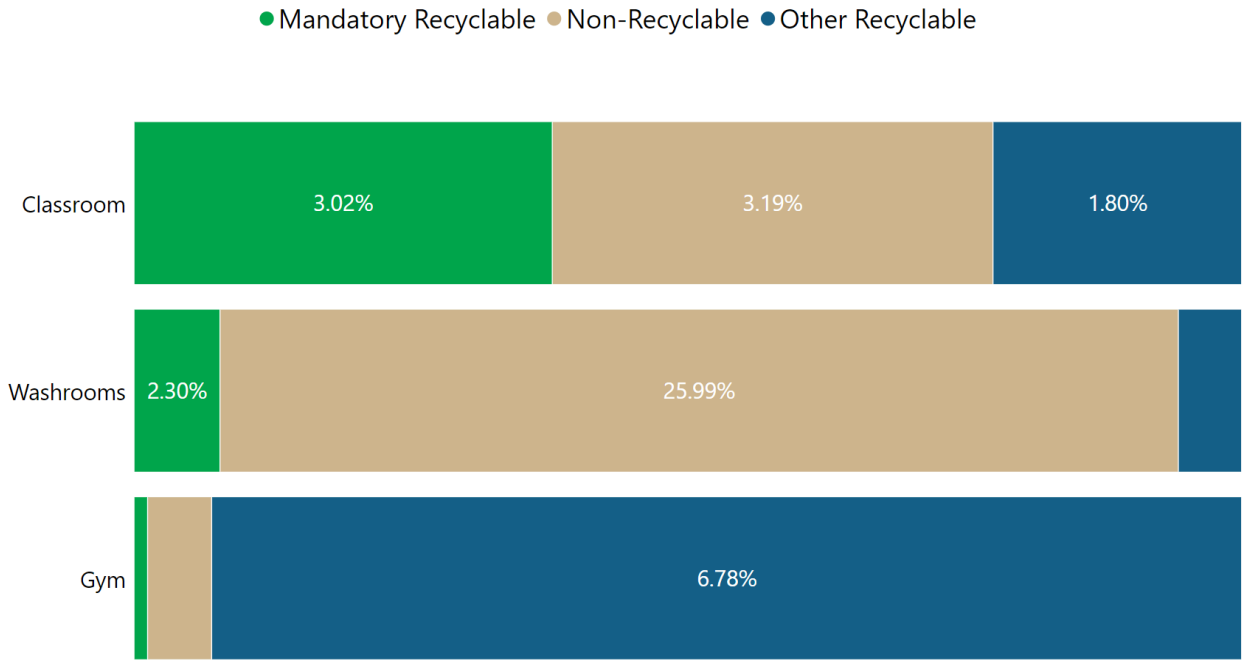
- Aseptic containers
- Batteries
- Boxboard
- Coffee Cups
- Composite Cans
- Electronics Waste
- Gable top containers
- HDPE #2 plastic containers
- Kraft paper/other fibres
- Lightbulbs
- Molded pulp
- Other plastics #7
- PET #1
- PP #5
- Printer toner/cartridges
- Scrap wood
- Scrap metal
- Textiles

Other (Non-Recyclables)

Includes all other non-recyclable materials.

Below is an analysis of the garbage sample composition by material and material type (Mandatory Recyclables, Other Recyclables, and Non-Recyclables).

Figure 5: Ratio of Recyclables in Garbage Stream by Type of Recyclable Organized by Functional Area



The breakdown of recyclables in the garbage stream by material is shown in the figures below.

Table 4: Breakdown of Mandatory Recyclables in Garbage Sample by Material (in kg and % of garbage sample mass)

Sampled Stream	Garbage	
O.Reg 103/94 Type	Annual Quantity (MT)	%
Mandatory Recyclable	**2.69**	**33.85%**
Cardboard	1.28	16.07%
Fine Paper	1.26	15.93%
Aluminum	0.09	1.12%
Glass	0.06	0.73%
Total	**2.69**	**33.85%**

Table 5: Breakdown of Other Recyclables in Garbage Sample by Material (in kg and % of garbage sample mass)

Sampled Stream	Garbage	
O.Reg 103/94 Type	Annual Quantity (MT)	%
Other Recyclable	**1.77**	**22.31%**
Boxboard	0.82	10.33%
Kraft Paper/Other Fibres	0.54	6.83%
PET #1	0.18	2.25%
Gable Top Containers	0.06	0.76%
PP #5	0.05	0.61%
HDPE Plastic Containers #2	0.03	0.44%
Other Plastics #7	0.03	0.42%
Aseptic Containers	0.03	0.32%
Textiles	0.02	0.31%
Coffee Cups	0.00	0.05%
Batteries	0.00	0.01%
Total	**1.77**	**22.31%**

Notable observations are discussed below:

- The garbage sample consisted of 33.85% Mandatory Recyclables, 22.31% Other Recyclables, and 43.84% Other (Non-Recyclable) material.
- The Mandatory Recyclables in the garbage stream consisted of (in % of total sample mass):
    - Cardboard - 16.07%
    - Fine paper - 15.93%
    - Aluminum - 1.12%
    - Glass - 0.73%
- The Other Recyclables in the garbage stream consisted primarily of:
    - Boxboard - 10.33%
    - PET #1 - 6.83%
    - PP#5 - 2.25%

4.6 Estimated Annual Quantities Generated

The annual quantity was calculated using the following equation, based on 194 days in the school year and the sample mass generated over a one-day sampling period.

Estimated Annual Quantity = Number of days in school year x sample mass

Each material's estimated annual quantities were calculated and provided in the table below.

Table 6: Estimated Annual Quantities by Material

Divertible Material	Diverted Through Red Box Program (MT)	Diverted Through Blue Box Program (MT)	Landfill Quantity (MT)	Total Generated (MT)	%
Dr David Suzuki Public School	**3.82**	**1.60**	**7.94**	**13.37**	**100.00%**

Glass	0.00	0.00	0.06	0.06	0.44%
Moulded Pulp	0.05	0.00	0.00	0.05	0.38%
Textiles	0.00	0.00	0.02	0.02	0.18%
PPE	0.00	0.01	0.00	0.01	0.10%
Coffee Cups	0.00	0.00	0.00	0.01	0.04%
Scrap Metal	0.00	0.00	0.00	0.00	0.01%
Batteries	0.00	0.00	0.00	0.00	0.01%
Total	**3.82**	**1.60**	**7.94**	**13.37**	**100.00%**

Notable Observations are discussed below:

- 13.37 MT of material are expected to be generated annually which consists primarily of the following materials:
    - Fine paper - 2.58 MT
    - Organics - 2.08 MT
    - Paper towels - 2.02 MT
    - Cardboard - 1.45 MT
    - Boxboard - 1.36 MT

5.0 Performance Metrics

5.1 Waste Diversion Rate

Waste diversion is the percentage of waste materials a facility diverts from landfills due to reducing, reuse and recycling (3Rs) programs versus the total amount of waste generated (3Rs plus landfill waste). The Ministry of the Environment, Conservation and Parks defines the Waste Diversion rate calculation as follows:

$$\text{Waste Diversion Rate} = \frac{\text{Total Waste Diverted (3Rs)}}{\text{Total Waste Generated}} \times 100$$

Table 7: Waste Diversion Rate

Year	Garbage Annual Quantity (MT)	Red Box Annual Quantity (MT)	Blue Box Annual Quantity (MT)	Total Diverted (MT)	Total Generated (MT)	Waste Diversion Rate
2024						
Dr David Suzuki Public School	7.94	3.82	1.60	5.42	13.37	40.58%

The 2024 **waste diversion rate was calculated to be 40.58%** (below the provincial objective of 60%) based on 5.42 MT of diverted waste and 13.37 MT of total waste generated and 194 school days.

5.2 Capture Rate

The capture rate is the proportion of divertible waste materials successfully diverted from disposal compared to the total amount of divertible waste materials generated. It measures the effectiveness of existing recycling programs.

The Recycling Council of Ontario defines the Capture Rate calculation as follows:

$$\text{Capture Rate} = \frac{\text{Total Divertible Material Captured (3Rs)}}{\text{Total Divertible Material Generated}} \times 100$$

Below are the capture rates for all divertible materials included in existing waste diversion programs at the Site.

Table 8: Capture Rates for Diversion Programs

Divertible Material	Landfill Quantity (MT)	Diverted Through Red Box Program (MT)	Diverted Through Blue Box Program (MT)	Total Generated (MT)	Capture Rate
Dr David Suzuki Public School					
Red Box	3.91	2.00	0.08	5.99	34.73%
Blue Box	0.53	0.09	1.01	1.63	67.68%
Special items	0.02	0.00	0.00	0.02	0.00%
Electronics recycling	0.00	0.00	0.00	0.00	0.00%
Total	**4.46**	**2.09**	**1.09**	**7.64**	**41.65%**

The overall **Capture Rate is 41.65%** based on a total diverted quantity of 3.18 MT and a total potential divertible quantity of 7.64 MT. The Blue Box capture rate was 67.68% and Red Box capture rate was 34.73%.

6.0 Waste Audit Summary and Waste Reduction Work Plan

Refer to Appendix F for the Waste Audit Summary and the Waste Reduction Work Plan.

According to O.Reg.102/94, the Waste Reduction Work Plan or a plan summary must be posted at the facility where employees can review it. If a summary is posted, the entire Work Plan should also be made available for review by any employee upon request.

7.0 Findings and Conclusions

The conclusions discussed below are based on the waste audit findings. It should be noted that the conclusions and recommendations provided in this report are based on the waste audit sample results, which are considered representative of the annual quantities for this report. The estimates in this report have yet to account for fluctuations in waste quantities generated daily.

<u>Sample Composition</u>

- Garbage stream samples had the highest sample mass (59.24%) followed by Red Box (28.59%) and the Blue Box stream (11.99%).

Composition By Waste Stream

- **Garbage Stream** - the garbage stream had the highest sample mass and consisted primarily of organics (9.41kg, 13.65%) fine paper (6.52kg, 9.46%) and cardboard (6.58kg, 9.55%).
- **Red Box** - consisted primarily of paper towels (6.78kg, 9.84%) and fine paper (6.39kg, 9.27%).

- **Blue Box** - consisted primarily of LDPE #4 plastic, aseptic containers and HDPE #2 plastic.

Composition by Functional Area

- **Classroom** - generated the highest sample mass (92.67% of total sample mass) which consisted primarily of fine paper, organics, paper towels, cardboard and boxboard.

Contamination

- The contamination rates for the sampled streams were as follows: Garbage stream - 23.12%, Red Box stream - 0.06% and Blue Box stream - 0.67%.
- The **Red Box** sample consisted of 52.44% Red Box material, 45.23% Garbage material and 2.34% Blue Box material.
    - 34.42% of the Red Box sample consisted of paper towels, 32.44% consisted of fine paper, 14.11% consisted of boxboard and 5.18% consisted of organics.
    - 47.57% of the Red Box sample was contaminated with Blue Box material or garbage which consisted primarily of paper towels, organics and LDPE #4 plastic
- The **Blue Box** sample consisted of 63.32% Blue Box material, 31.96% garbage material and 4.72% Red Box material.
    - 16.22% of the Blue Box sample consisted of aseptic containers or LDPE #4 plastic film, 15.74% consisted of HDPE #2 plastic, 13.08% consisted of PET #1 and 12.23% consisted of aluminum.
    - Roughly 36.68% of the Blue Box sample was contaminated with garbage or Red Box material. Contaminated material consisted primarily of LDPE #4 plastic, non-recyclable material, fine paper, polystyrene #6, organics and paper towels.
- The **garbage** sample consisted of 49.21% Red Box material, 43.84% garbage material, 6.64% Blue Box material, and 0.31% Electronics/Special items.
    - The garbage sample consisted primarily of organics, cardboard, fine paper, boxboard, paper towels, non-recyclables, and kraft paper.
    - Roughly 56.16% of the garbage stream sample was contaminated with Red Box material, Blue Box material, or Electronics/Special items. Contamination in the garbage stream consisted primarily of organics, paper towels and non-recyclables.

Recyclables in the Garbage Stream

- The garbage sample consisted of 33.85% Mandatory Recyclables, 22.31% Other Recyclables, and 43.84% Other (Non-Recyclable) material.
- The **Mandatory Recyclables** in the garbage stream consisted of (in % of total sample mass):
    - Cardboard - 16.07%
    - Fine paper - 15.93%
    - Aluminum - 1.12%
    - Glass - 0.73%
- The **Other Recyclables** in the garbage stream consisted primarily of:
    - Boxboard - 10.33%
    - PET #1 - 6.83%
    - PP#5 - 2.25%

Estimated Annual Quantities Generated

- 13.37 MT of material are expected to be generated annually which consists primarily of the following materials:
    - Fine paper - 2.58 MT
    - Organics - 2.08 MT
    - Paper towels - 2.02 MT
    - Cardboard - 1.45 MT
    - Boxboard - 1.36 MT

Waste Diversion Rate

- The 2024 **waste diversion rate was calculated to be 40.58%** (below the provincial objective of 60%) based on 5.42 MT of diverted waste and 13.37 MT of total waste generated and 194 school days.

Capture Rate

- The overall **Capture Rate is 41.65%** based on a total diverted quantity of 3.18 MT and a total potential divertible quantity of 7.64 MT. The Blue Box capture rate was 67.68% and Red Box capture rate was 34.73%.

8 Recommendations

Based on the conclusions, the following recommendations are tied to the conclusions discussed in the previous section.

The Site diverts 40.58% of generated waste through existing programs, above the provincial objective of 60%. The capture rate is 41.65%. There are opportunities to improve the waste diversion rate and capture rate further.

8.1 Improve Existing Waste Diversion Programs

Improving the following existing diversion programs could improve waste diversion and capture rates.

Mandatory Recyclables

- **Cardboard — 1.28 MT** of material is estimated to be generated annually through the garbage stream. Diverting this material through the existing Red Box stream could **increase the waste diversion rate up to 9.55%** and **could increase the capture rate up to 16.7%.**
- **Fine paper — 0.26 MT** of material is estimated to be generated annually through the garbage stream. Diverting this through the Red Box stream could **increase the waste diversion rate up to 9.46%** and **could increase the capture rate up to 16.55%.**
- **Aluminum — 0.09 MT** of material is estimated to be generated annually through the garbage stream. Diverting this material through the existing Blue Box stream could **increase the waste diversion rate up to 0.66%** and **could increase the capture rate up to 1.16%.**

Red Box and Blue Box Streams

- **Boxboard** - **0.82 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing Red Box stream could **increase the waste diversion rate by up to 6.1%.**
- **Kraft Paper/Other Fibres** - **0.54 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing streams could **increase the waste diversion rate by up to 4.1%.**
- **PET #1** - **0.18 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing Blue Box stream could **increase the waste diversion rate by up to 1.3%.**
- **Gable top containers** - **0.06 MT** of material is estimated to be generated annually through the garbage stream. Diverting this quantity through the existing streams could **increase the waste diversion rate by up to 0.45%.**

8.2 Add Organics/Paper Towels Diversion Programs

Organics generated in the garbage stream accounted for 1.83 MT of material annually. Diverting this material through a new organics diversion program **could increase waste diversion by up to 13.65%**.

Paper towels generated in the garbage stream accounted for 0.68 MT of material annually. Diverting this material through a new organics diversion program **could increase waste diversion by up to 5.05%**.

8.3 Dedicated Receptacles and Update Signage

Waste diversion rates could be improved by implementing dedicated receptacles with clear signage to encourage waste separation at the source. Provide dedicated receptacles with signage and pictograms as a clear message to staff and students to separate divertible materials from landfill waste at source. Pictograms can provide examples of the types of waste

suitable for the waste collection stream. Divertible material should be consolidated into a centralized location and picked up by a dedicated contractor.

8.4 Promoting Culture

A committee is recommended to oversee waste reduction and sustainability and promote a culture of waste diversion. Educate students and staff on the importance of waste diversion and communicate the corporate goals for waste diversion and sustainability. Create a positive message around the benefits of waste diversion and the individual's role.

- Support and encourage purchasing and using “environmentally friendly,” reusable or recyclable materials, packaging, and/or recycled content.
- Ensure an Environmental Policy is visible in common areas throughout the building and continue to emphasize the facility’s commitment to environmental stewardship through its training program and green or environmental initiatives.
- Encourage staff and students to prioritize bringing reusable containers, water bottles, and coffee cups.
- Promote and highlight current environmental programs and efforts through newsletters, posters, and/or bulletin boards for waste management.

8.5 Continuous Monitoring and Process Improvement

Track year-over-year changes in waste diversion capture rates and communicate progress to staff and students to encourage further participation/engagement.

Continuous monitoring and reporting for this site annually and comparison with year-over-year changes would provide insight into trends, which can be used as a basis for policy decisions regarding solid waste management for future projects. Further refinements to programs/processes can be made, and adherence to provincial requirements can be achieved.

Appendices

Appendix A: List of Categories

Material Category	Description
1. Paper and Paper Products	
Fine Paper	Includes mixed fine papers, writing paper, office paper, copy paper, bills and statements, ad mail, lottery tickets, receipts, envelopes, promotional cards, promotional calendars, printed information found within packaged products, etc. • Also includes softcover books, booklets, magazines, catalogues, calendars, flyers, and inserts.
Newsprint	Major daily and weekly newspapers and community newspapers. Does not include flyers and inserts.
Shredded Confidential Papers	Any paper that has been shredded.
Boxboard	Single-layered paperboard and fibre board with no corrugation. This includes cereal boxes, shoe boxes, cores from toilet paper, paper towels, gift wrap, etc.
Kraft Paper	Kraft paper bags and wrap, grocery or retail bags, potato bags, pet food bags, etc. Includes brown, white, and coloured kraft paper and bags. No bags with bonded plastic or foil lining.
Corrugated Cardboard	Waxed or unwaxed corrugated cardboard containers. Includes moulded pulp materials such as egg cartons, drink trays, other trays, etc.
Gable Top Containers	Polycoat containers with a gable-shaped top are used for milk, juice, some foods, etc.
Aseptic Containers	Tetra-pak-type polycoat packaging containers are used for juice, milk, soups and broths, alternative milk beverages, and alcoholic beverages.
Composite Cans	Spiral-wound cans with paper walls and plastic or metal tops or bottoms. They contain frozen juice, Pringles chips, dough, some raisins, etc.

Coffee Cups	All cups and containers used for hot/cold beverages and food (without a plastic oHot Primarily, hot/cold food and beverage containers are common in the fast food industry. Includes paper-based cups with a plastic lining, water cooler cups, freezer boxes, etc.
2. Plastic	
#1 Polyethylene Terephthalate (PET)	All PET #1 plastics. This includes clear or coloured thermoform packaging, beverage bottles, and non-beverage bottles used for food and non-food items such as dish soap, shampoo, mouthwash, window cleaner, and floor cleaner. ● Does not include Black Plastics.
#2 High-Density Polyethylene (HDPE)	All HDPE #2 plastics. Includes natural and coloured bottles, jugs, and containers for beverages, food items, and non-food items such as laundry soap, shampoo, bleach, vinegar, pill bottles, etc. ● Does not include Black Plastics.
#4 Low-Density Polyethylene (LDPE) Films	All #4 LDPE plastic films. This includes soft, "stretchy" PE plastic used for items such as produce bags, water bottle overwraps, garbage bags, kitchen liners, blue or clear recycling bags, sandwich and freezer bags, etc. ● Does not include Black Plastics.
#5 Polypropylene (PP)	All #5 PP plastics. Includes clear and coloured food containers, jugs, jars, take-out beverage cups, bottles, and jars for food items. ● Does not include Black Plastics.
#6 Non-Expanded Polystyrene (PS)	All Non-Expanded (rigid) #6 PS plastics. Includes clear or coloured rigid food trays, clamshells, cup lids, yogurt cups, CD and DVD cases only (no disk), etc. ● Does not include Black Plastics.
Other Recyclable Plastics (#3, 4, 7)	All other recyclable plastics (#3, 4, 7). Includes clear and coloured bottles, jugs, jars, and containers.
3. Glass/Metal	

Glass:	All clear and coloured glass. Includes bottles and containers for food, beverages, cosmetics, toiletries, household pharmaceutical products, candle jars, etc. • Does not include non-recyclable glass such as windowpane glass, plates, drinking glasses, figures, or incandescent light bulbs.
Aluminum	All aluminum containers and foils. Includes food and beverage containers, rigid aluminum trays (pie plates, baking trays, etc.), empty aerosol containers, and containers for hair products, tubes, etc. • Does not include full or partially full pressurized cans.
Steel	All steel containers. Includes food and beverage containers, empty spray cans (for cooking oil, whipped cream, etc.), and empty paint cans. • Does not include full or partially full pressurized cans.
4. Organics	
Organic Food Waste	All edible and non-edible organic waste from food items. Includes untouched and leftover bakery, meat & fish, dried food, fruits & vegetables, dairy, and other foods.
Other Organics:	All other organic materials that are not derived from food items. Includes yard waste, grass clippings, small wood waste, pet waste, diapers and sanitary products, certified compostable plastic bin liners, and other compostable papers.
Compostable fibres	Include paper towels, paper napkins, toilet paper, facial tissues, etc.
5. Operational waste	
Other metals,	Scrap metals, copper pipes, hardware, etc. Includes multi-material items that are mainly metal.

Non-Treated Wood	Non-treated wood materials. Includes skids/pallets, wooden furniture, etc. • Does not include branches, brush, or wood chips.
Batteries	All single-use and rechargeable batteries. Includes Alkaline-Manganese, Lithium, Silver Oxide, Zinc Air, Zinc-Carbon, etc.
Printer Toners	All ink cartridges and printer toners.
E-Waste	All waste is from electrical and electronic equipment (WEEE). Anything that is battery-operated and/or can be plugged into an electrical outlet. Includes computer/IT equipment, telecom equipment, TV & audio equipment, small kitchen appliances, wires/chargers /adapters, cocks, gadgets, etc.
Plastic Strapping	This is All-Plastic Strapping material. It is used to bundle products for retail sales and can come in various colours and plastic materials.
6. Non-Recyclable Waste	
Non-Recyclable/Garbage	All other non-recyclable waste materials are not classified elsewhere. Includes hazardous waste, coffee cups, black plastics, and expanded polystyrene, all described below. Includes chip bags, furnace filters, laminated papers, rigid or durable plastics, non-recyclable glass, dust, single-use cleaning wipes, single-use coffee pods, plastic straws and cutlery, materials too small to process, etc.
Hazardous Wastes	All hazardous wastes are not classified elsewhere. Includes full or partially full pressurized cans, paints, and oil containers. • Also includes fluorescent light bulbs and tubes, medical sharps and syringes, mercury-containing devices, pharmaceuticals, antifreeze, fertilizers, solvents, pesticides, etc. • Also includes all other liquid or non-liquid items with signal words such as "Poison," "Danger," "Warning," "Caution," and "Precautionary Statements."

Cold Beverage Wax-Lined Cups	All cups and containers have a plastic or wax lining. Multiple-layered, primarily fibre, hot/cold food and beverage containers are common in the fast food industry. This includes paper-based cups with a plastic lining, water cooler cups, freezer boxes, etc.
Black Plastics	Includes all Black Plastics #1-7 and unmarked. • Also includes rigid, durable, and expanded Black Plastics and black plastic bags.
Expanded Polystyrene	This includes white, coloured, and black polystyrene foam packaging for food trays, clamshells, etc., as well as foam packaging for "peanuts" and foam blocks used to protect boxed products.
