Designated Substances Management Plan

**Prince Andrew PS
1950 Kelly Rd., LaSalle, Ontario, N9A 6Z6**

Original Survey Dated: September 3, 1995

Revision Dates: March 12, 1996, August 1, 2001, August 1, 2002, May 24, 2003, August 13, 2004, January 2005, July 14, 2006, August 9, 2007, August 7, 2008, August 9, 2008, August 13, 2010, August 13, 2011, August 13, 2012, August 13, 2013, August 13, 2014, February 13, 2015, February 13, 2016, February 13, 2017, February 13, 2018, February 13, 2019, February 13, 2020, February 13, 2021

Current Version: February 13, 2022

Executive Summary

The Greater Essex County District School Board (GECDSB) conducted an annual update for potential Designated Substances present in the building facility of Prince Andrew Public School. This notes the conditions and locations of observed, known and suspected Designated Substances found in accessible areas of the building. Asbestos (friable and non-friable asbestos-containing materials (ACMs)), Lead, Silica, and Mercury are the four most common types of Designated Substances encountered at GECDSB sites.

Other Designated Substances such as Arsenic, Benzene, Vinyl Chloride, Acrylonitrile, Coke Oven Emissions, Ethylene Oxide and Isocyanates are not likely to be found at a typical GECDSB site.

This annual update involved reviewing and documenting known abatements, repairs and conditional changes of known or suspected Designated Substances utilizing the work order system.

The following information provides a summary of where our observed, known and suspected Designated Substances are located at this site.

Asbestos

Friable chrysotile asbestos (25 – 30%) is present in thermal insulation on pipe fittings & boiler / boiler breeching (i.e. domestic hot and cold water, hot water heating, rain water leaders) located in several areas throughout. Friable asbestos (assumed) thermal insulation is present under metal jacketing on boilers in the Boiler Room. Friable chrysotile asbestos (28%) texture coat is present on ceilings in several areas. Friable chrysotile asbestos (1%) plaster finishes are present throughout. Friable asbestos (assumed) fire door cores are present throughout. Non-friable chrysotile asbestos (3%) is present in black mastic pipe wrap thermal insulation under sinks in several locations. Non-friable asbestos (assumed) chalkboards are present in several areas. Non-friable chrysotile asbestos (5%) adhesive pucks are present on walls in S6. Non-friable chrysotile asbestos (1%) and chrysotile/amosite asbestos (1% each) acoustical ceiling tiles are present throughout.

Non-friable asbestos (assumed) exterior hard plaster overhangs are present around the perimeter of the school. Non-friable asbestos (assumed) exterior caulking and firestop materials are present on windows, doors and building penetrations. Non-friable asbestos (assumed) gold and black mastics are present on the underside of sinks throughout. Non-friable asbestos (assumed) vinyl floor tiles sized 9 inches by 9 inches are present in several areas. Non-friable chrysotile asbestos (2-4%) vinyl floor tiles sized 12 inches by 12 inches are present throughout. These friable and non-friable ACMs were found to be in good and poor physical condition (see tables and floor plans for more specifics).

Additional ACMs may exist in the above-noted non-accessible areas, as well as in enclosed areas behind walls, ceilings or floor surfaces, which were not accessible without causing unplanned physical demolition/destruction.

Special Note: Although vermiculite insulation was found to be present in exterior block wall cavities of the structure, with the exception of the 2012 addition, it has analytically been confirmed through both PLM and Mineral Analysis on October 7, 2021 **Not to Contain Asbestos.**

Lead

The original building structure known as Prince Andrew PS was built in 1961 and therefore all paints and varnishes per the original building structure are assumed to contain Lead. Samples of Lead paint taken in 2012 confirm Lead content ranging from 1860 PPM to 7380 PPM.

Building additions / renovations took place in 1971 and 1990 in which all paints and varnishes utilized would also be assumed to contain Lead.

A building addition / renovation also took place in 1995 in which all paints and varnishes utilized per this addition / renovation would fall under the 1992 version of the Coatings Regulation with Lead being < 600 PPM.

In 2012 a building renovation took place to help facilitate full day kindergarten. All paints and varnishes utilized per this building renovation would fall under the 2010 version of the Coatings Regulation with Lead being < 90 PPM.

It should be noted that materials such as piping, machinery, equipment and batteries may also possibly contain lead.

Silica

All concrete, bricks, masonry, terrazzo, mortar, ceramic floors, ceiling tiles, sand and like materials are assumed to contain Silica.

On occasion an Arts/Pottery class may take place in which they utilize Clay Body 700 which is 0.5% silica containing. This is temporary as such Clay Body 700 is brought in from a third party and removed after. No sanding is conducted and all such pottery work is done while wet/moist.

On occasion schools may wish to purchase sand for curriculum related activities. Such sand purchases are to be made through Webstock and the sand has to be Silica Free.

Mercury

Possible Mercury containing thermostats, thermometers, switches, batteries and fluorescent lamp tubes are assumed to contain Mercury.

Disclaimer

The information and opinions rendered in this report are exclusively for use by the above noted. Additional Designated Substances may exist at this site in non-accessible areas as well as in enclosed areas behind walls, ceilings or floor surfaces which were not accessible. The Health & Safety Department does not warrant nor represent that all designated substances have been identified in the building facility.

P-3	151631	Classroom #8 100% Gray fiber	28% Chrysotile	72% Non-Fibrous Material	SK 2/27/96
28% asbestos in composite sample					

Additional testing is recommended for any material which contains <1% asbestos or NOB (non-friable organically bound) bulk materials which are negative or <1% asbestos. Analysis by Polarized Light Microscopy (PLM) has a degree of uncertainty that is dependent on the sample matrix, non-asbestos materials present, size of the asbestos present, the sample homogeneity and analyst variability. PLM coefficients of variance range from approx. 1.2, to 0.1 at high fiber concentrations. All PLM analyses must be reviewed with these factors taken into consideration.

These results are submitted pursuant to Chopro-Lee, Inc.'s current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. Pinchin Ltd. Asbestos Laboratory Certificate of Analysis

October 7, 2021

Indoor Environmental Specialists
P.O. Box 23004
Chatham ON N7L 0B1

Attention: Samantha Clark

Lab Reference No.: b259935
Client Project Name: C4567E
Client Project No.: C4567E
Date Received: September 30, 2021
Date Analyzed: October 7, 2021
Analyst(s): W. Mirza
Samples submitted: 3
Phases analyzed: 3

Methods of Analysis:

EPA 600/R-93/116 - Method for the Determination of Asbestos in Bulk Building Materials dated July, 1993

Bulk samples are checked visually and scanned under a stereomicroscope. Slides are prepared with representative portions of material and observed under a Polarized Light Microscope (PLM) at magnifications of 40X, 100X or 400X as appropriate. Asbestos fibres are identified by a combination of morphology, colour, refractive index, extinction, sign of elongation, birefringence and dispersion staining colours. A visual estimate is made of the percentage of asbestos present. A reported concentration of less than (<) the regulatory threshold (see chart below) indicates the presence of confirmed asbestos in trace quantities, limited to only a few fibres or fibre bundles in an entire sample. This method complies with all provincial regulatory requirements (NIOSH 9002, I.R.S.S.T. MA-244). Multiple phases within a sample are analyzed and reported separately.

Provincial Jurisdiction	Regulatory Threshold	Provincial Jurisdiction	Regulatory Threshold
Ontario, British Columbia, Nova Scotia	0.5%	PEI, NWT, Yukon, Nunavut, Newfoundland and Labrador, and New Brunswick	1%
Quebec	0.1%	Saskatchewan	0.5% friable 1% non-friable
Alberta	Undefined	Manitoba	0.1% friable 1% non-friable

All bulk samples submitted to this laboratory for asbestos analysis are retained for a minimum of three months. Samples may be retrieved, upon request, for re-examination at any time during that period.

The Pinchin Ltd. Mississauga asbestos laboratory is accredited by the National Institute of Standards and Technology, National Voluntary Laboratory Accreditation Program (NVLAP Lab Code 101270-0) for the 'EPA – 40 CFR Appendix E to Subpart E of Part 763, Interim Method of the Determination of Asbestos in Bulk Insulation Samples,' and the 'EPA 600/R-93/116: Method for the Determination of Asbestos in Bulk Building Materials'; and meets all requirements of ISO/IEC 17025:2017.

This report relates only to the items tested. If you have any questions, please feel free to contact me.

Yours truly,

NOTE: This test report may not be reproduced, except in full, without the written approval of the laboratory. The client may not use this report to claim product endorsement by NVLAP or any agency of the U.S. Government. This report is valid only when signed in blue ink by the analyst and the laboratory manager. Vinyl asbestos floor tiles contain very fine fibres of asbestos and may be missed by some laboratories using the PLM method. Internal verification studies performed by Pinchin indicate that the chance of missing asbestos in floor tiles is no higher than about 2%. The vinyl tile study and laboratory documentation on measurement uncertainty are available upon request. The analysis of dust samples by PLM cannot be used as an indicator of past or present airborne asbestos fibre levels.

	Thermal Insulation Pipe Straights and Fittings							Non-ACM		Fibreglass Insulation	

Samples analyzed are identified by the prefix 'S' (e.g. S00001)
 Samples not collected but visually similar to other samples collected are identified by the prefix 'V' (e.g. V00001)

Location	Material Examined	Sample Number	Condition			Accessibility			Asbestos Content	Friable (Y/N)	Comments
			Good	Fair	Poor	Accessible	Rarely Accessible	Not Accessible			
W12, W13, W14 1st Floor Level	Ceiling Tiles	VPA-11							Non-ACM		
	Drywall Joint Compound								Non-ACM		Not Suspected to be Asbestos-Containing
	Baseboard Mastic								Non-ACM		Not Suspected to be Asbestos-Containing
	Vinyl Floor Tile 12" x 12"								Non-ACM		Not Suspected to be Asbestos-Containing
H4 1st Floor Level	Thermal Insulation Pipe Straights and Fittings								Non-ACM		Fibreglass Insulation
	Ceiling Tiles	VPA-11							Non-ACM		
	Drywall Joint Compound								Non-ACM		Not Suspected to be Asbestos-Containing
	Baseboard Mastic								Non-ACM		Not Suspected to be Asbestos-Containing
Exterior / Interior Roof Top	Vinyl Floor Tile 12" x 12"								Non-ACM		Not Suspected to be Asbestos-Containing Retiled 2002, Repaired July 2010
	Thermal Insulation Pipe Straights and Fittings								Non-ACM		Fibreglass Insulation
	Vermiculite Inside Exterior Walls	2021-V01A / B/ C							Non-ACM		Vermiculite was found to be present but analysis confirms it is not asbestos containing. Aggressive survey work done by IES September 2021
	Caulking		X				X		Assumed	No	Assumed Asbestos
Roof Top	Hard Plaster Overhangs		X				X		Assumed	Yes	Assumed Asbestos
	Firestop Materials		X				X		Assumed	No	Assumed Asbestos
									Non-ACM		New Material

Samples analyzed are identified by the prefix 'S' (e.g. S00001)
 Samples not collected but visually similar to other samples collected are identified by the prefix 'V' (e.g. V00001)

Designated Substance Management Plan - TABLE # 20
 Last Revised: February 13, 2022
 Building Name: Prince Andrew Public School

Location	Material Examined	Sample Number	Condition			Accessibility			Asbestos Content	Friable (Y/N)	Comments
			Good	Fair	Poor	Accessible	Rarely Accessible	Not Accessible			
Interior/Exterior Throughout	Lead - Paints & Varnishes - Sampled in CZ, CR	P-1, P-2 & P-3	X	X						Range From 48 to 1,860 PPM Lead.	
	Lead - All Other Paints & Varnishes		X							Assumed Lead-Containing.	
	Lead - Piping, Machinery, Equipment, Batteries									Paint damages noted in OF5, S6, Stage, S3, S5 and D2. Repaired March 2019	
Interior/Exterior Throughout	Silica - All Concrete, Brick, Masonry, Terrazzo, Ceiling Tiles, Sand									Assume Lead-Containing	
Art Class/Pottery	Silica - Clay Body 700									Assume Silica-Containing	
Interior/Exterior Throughout	Mercury - Some Thermostats, Switches, Batteries, Fluorescent Bulbs									Assume Mercury-Containing	

Samples analyzed are identified by the prefix 'S' (e.g. S0001)

Samples not collected but visually similar to other samples collected are identified by the prefix 'V' (e.g. V0001)
